

Important temporary pricing note:

We are doing our first ever sale in more than a dozen years of manufacturing, running through **Oct. 31, 2010**.

Whether retail or dealer, the discounts and/or spiffs are the same, they just either discount from the retail or dealer prices as appropriate.

The sale prices/spiffs are as follows:

1) CAC cans in any model or caliber: \$35 off.

We'll throw in a free wrench and Griptastic™ cover. We raised the price on Versadapt™ Uzi inserts \$20 since announcing this sale would be happening, so take \$20 off any Uzi insert while you're at it to keep things fair.

2) Paradigm .22 can: \$45 off.

We'll throw in a free Griptastic™ cover.

When we updated the catalog, we added an option to order these with a mount which accepts ATAS™ inserts at the same price, so if that appeals to you, make sure you select the correct box on the order form and select the insert. Those come with one insert of your choice included.

3) ATAS™ .45 pistol can: \$60 off.

These now come with free wrench and bag

If you'd like to take advantage of these discounts, please send the following, postmarked prior to October 31, 2010:

1) Completed Order Form

2) Your contact information with phone number, email, and address (please note we ship via US Mail).

3) A copy of your signed FFL and EIN (please indicate if you are not a special occupation taxpayer or call for assistance at 503-992-8697).

4) Check or money order for payment made out to: Bowers Group, LLC (please don't send cash through the mail).

Company Commitments and Policies

Some background:

As one of the oldest and most prolific suppressor manufacturers in the nation, we've seen, learned and done a lot. By 1999, Bowers had already made 1.67% of the suppressors on the national registry. That may not sound like much, until you consider the registry started in 1934, 65 years before that. This isn't a hobby; we do it for a living.

Most businesses fail, including suppressor businesses. Many competitors have come and gone, not necessarily because of problems with their products. Unfortunately for their clients, it's nearly impossible to get service on those cans because of liability issues. We suggest there is a value in buying from a manufacturer with a long time in the business and a solid, unwavering track record of standing behind the products they have sold.

Our commitments to you:

Bowers has since gown into Bowers Group LLC, but we still stand behind every can we have ever made. We consider it immaterial how old it is, that it may have been discontinued a decade ago by Bowers before this company ever existed, or that you may not be the original owner. Our service goal is to get most cans out the door in 1-2 working days.

When necessary, we will make parts for suppressors we've discontinued so we can service those cans. If this is necessary, it will take longer.

Whenever possible, we will continue to make our improvements backwards compatible and upgrades available for a nominal fee.

We almost always answer the phone. When we can't and you leave a number, we'll call you back. Email is sketchy. If it's important to you, the phone is the tool to use.

Our service policy:

We don't try to assign blame. Instead, we provide you with fast, courteous service.

If you deliberately destroy a suppressor or have someone else do so, you're likely on your own, but you can send it in and we'll see if there's anything we can reasonably do. If you shoot up the baffle stack with a bad threading job or because the can got loose, or you've filled it with crud from firing countless tens of thousands of rounds through it over the years, we don't care; we'll be happy to fix it.

We don't charge for parts or labor; we just ask that you enclose a check (currently in the amount of \$15) to cover our return shipping. It's that simple and that fair, because we really do appreciate your support.

Quality:

We make all of our parts in our CNC machine shop. We can do production quantities of parts accurately and consistently run-to-run, which keeps costs down. The management here has some personal issues that work to your benefit; anal retentive control freaks obsessed with making nice parts have severe quality control standards. We prefer to say we're "focused". The photographs adequately illustrate the technical proficiency you can expect.

Why buy from us?:

We offer consistent, excellent quality and ongoing product support at a fair price. Our products have consistently improved over the years and we've always stood squarely behind them. We'll keep working to improve our existing products and to bring out worthy new products after we're satisfied they're ready. We have the track record to demonstrate that none of this is just talk; this is how we've operated since day one. That's our sales pitch in a nutshell.

We encourage you to shoot our products side by side with any similar competing can at any price point prior to making a purchasing decision. Use the same ammo and identical host platforms to get a fair result. If someone's trying to sell you one of them, look carefully into both cans first to make sure they're both dry inside, and stand in one place while someone else fires both into the same backstop without moving from his position. If your dealer doesn't have the product of ours you'd like to hear, we have dealer samples available which we will transfer on a temporary basis free of charge for demonstration use.

PO Box 430 Cornelius OR 97113

A note on the exciting new AIMS™ Mount and Versadapt™ Thread Adapters: This system adds such unparalleled versatility to our line that it is *now standard* on all Bowers CAC series submachine gun and carbine suppressors. It also fits our Flash Hider/Brake (FHB 45 and FHB 9) and the CFFS fake suppressor/barrel extension.

The new AIMS™ (Adapter Integrating Mount System™) is a physical mount attached to the rear of the suppressor tube in compliance with Federal law. The mount is threaded internally, thus the suppressor may be used with or without the thread adapting inserts.

Each suppressor comes with one Versadapt™ thread adapter of your choice. These thread adapting inserts are CNC crafted from stainless steel billet and feature a machined hexagonal head so you can quickly and easily change the thread pitch on your suppressor, enabling you to use one suppressor on many different firearms. The integrated system using our exclusive Versadapt™ inserts allow you to accomplish this without using a separate aftermarket thread adapter. Each insert is tastefully laser engraved for easy identification.

The AIMS™ system is fully backwards-compatible with all CAC-series submachine gun suppressors ever made, whether made last year or a dozen-plus years ago. With our gratitude to those who have supported us through the years, we offer retrofits to our older suppressors for a nominal fee, obviating the need for our existing customers to purchase new suppressors to receive our latest technological advancements.

Every suppressor comes with one Versadapt™ insert included. Any order placed which includes an additional insert will receive a free wrench (\$10 when ordered separately). This is a double ended wrench; one fits the Versadapt™ inserts, while the other fits the ATAS™ inserts for the Bowers ATAS™ .45 pistol suppressors and will also fit the inserts, mount and front cap for the upcoming USS .22 suppressor.

The AIMS™ Mount and Versadapt™ insert group for the CAC-series submachine gun and carbine suppressors is a follow-on variation of our earlier ATAS™ insert system for our ATAS™ .45 pistol suppressors. The AIMS™ inserts are significantly larger and the two systems are not interchangeable.

We have responded to client requests by continuously adding a variety of inserts, many of which are most commonly used on pistols. Please keep in mind that the CAC series cans are high volume cans engineered for heavy full auto fire using pistol-class cartridges, and therefore are not light enough to allow traditional semi-automatic pistols to cycle. Thus, while it is perfectly safe to also use any of these cans on a pistol, it will be comparatively large and the shooter should expect to operate the slide manually. While the system is extraordinarily versatile, we are still constrained by the laws of physics.

CAC 9 Suppressors

This is our 9mm subgun and carbine suppressor, rated for heavy fully automatic fire in that caliber. This suppressor is also ideal for subsonic .30 caliber applications such as the .300 Whisper. It is 11.25" overall and 1 3/4" diameter. It is strong and light, weighing approximately 18 oz. (varying depending on the selected insert).

The standard color is black, but you may order these with a royal purple tube at the same price if you prefer (or just want to shock your friends).

Trivia: All of our CAC-series tubes start as custom extrusions

The CAC 9 now features the new AIMS™ Adapter Integrating Mount System, which comes with one Versadapt™ thread adapter of your choice. Additional inserts may be ordered separately.

Please consider the purchase of a Griptastic™ high-temp insulating silicone suppressor cover for use with this suppressor.

Model	Retail Dealer
CAC 9	\$385 \$285 (with any non-Uzi insert)
CAC 9	\$465 \$365 (with Uzi insert)

CAC 45 Suppressors

This is our .45 ACP submachine gun and carbine suppressor, rated for heavy fully automatic fire in that caliber. This suppressor is quite popular with those who want the utmost in versatility due to the larger bore size.

Trivia: Clients have reported their CAC 45s are seeing service on .45-70 rifles

This suppressor is also suitable for 9mm and subsonic .30 caliber applications such as the .300 Whisper. It is 11.25" overall and 1 3/4" diameter. It is strong and light, weighing approximately 18 oz. (varying depending on the selected insert).

The CAC 45 now features the new AIMS™ Adapter Integrating Mount System, which comes with one Versadapt™ thread adapter of your choice. Additional inserts may be ordered separately.

Please consider the purchase of a Griptastic™ high-temp insulating silicone suppressor cover for use with this suppressor.

Model	Retail Dealer	
CAC 45	\$435	\$335 (with any non-Uzi insert)
CAC 45	\$515	\$415 (with Uzi insert)

CAC 380 Suppressors

This is our .380 subgun and carbine suppressor, rated for heavy fully automatic fire in that caliber. While designed with the little M11/380 submachine guns in mind, this suppressor is also suitable for 9mm and subsonic .30 caliber applications such as the .300 Whisper. We recommend the CAC 9 for better performance with those calibers unless size is a decision-driving concern. (Being longer, we can fit another baffle into it.) In those scenarios, the CAC 380 will still provide a perfectly acceptable level of suppression dry; alternatively, adding a small amount of water to the CAC 380 will put it on par with the longer CAC 9 used dry.

It is 8.6" overall and 1 3/4" diameter. It is strong and light, weighing approximately 15 oz.,=(varying depending on the selected insert). Because it is the same size envelope as the original Sionics single stage .380 suppressors, it will fit OEM Sionics and MAC accessories for the M11/380 such as holsters, nomex covers and operational briefcases.

The CAC 380 now features the new AIMS™ Adapter Integrating Mount System, which comes with one Versadapt™ thread adapter of your choice. Additional inserts may be ordered separately.

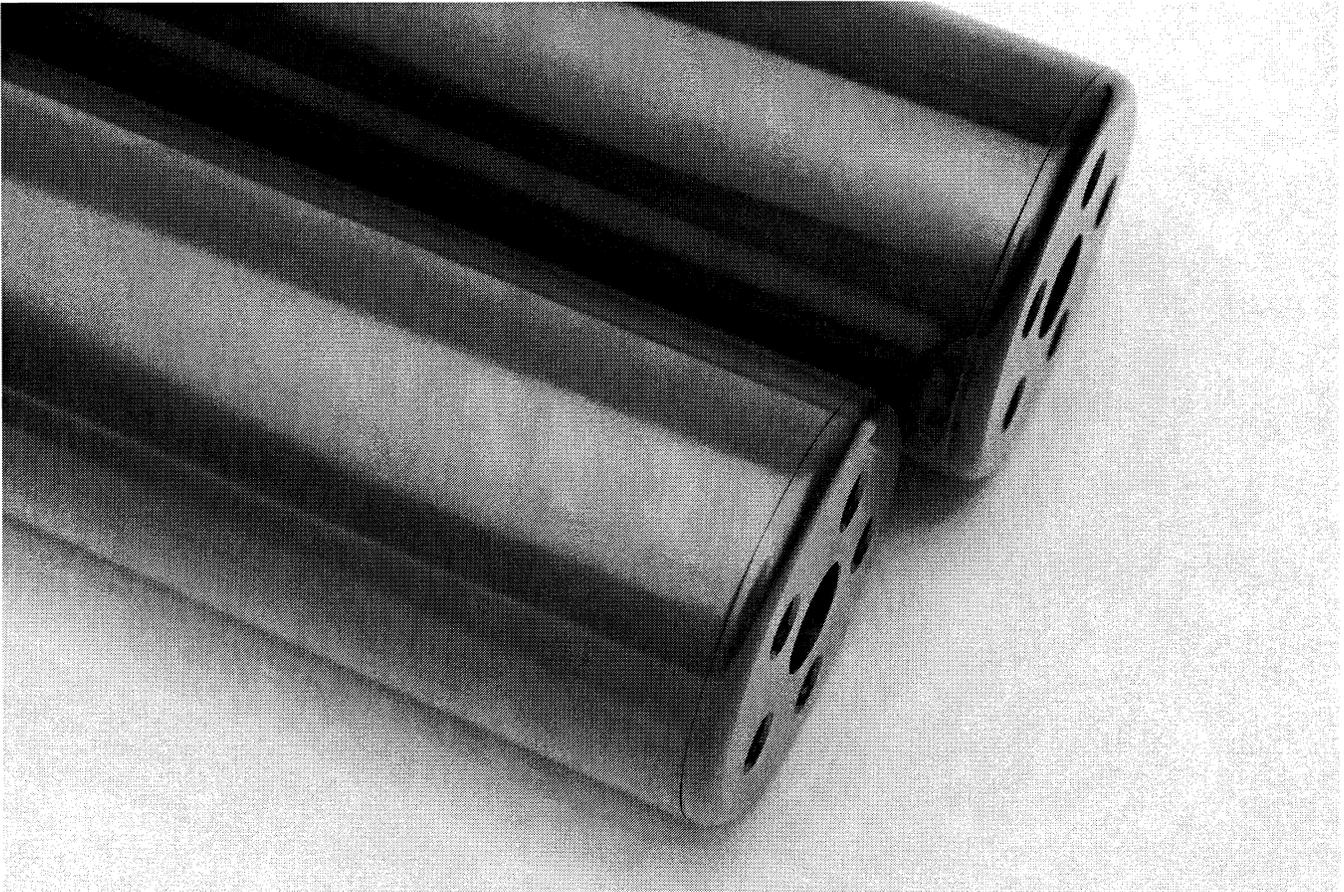

Please consider the purchase of a Griptastic™ high-temp insulating silicone suppressor cover for use with this suppressor.

Model	Retail Dealer	
CAC 380	\$385	\$285 (with any non-Uzi insert)
CAC 380	\$465	\$365 (with Uzi insert)

PAS 9 Suppressors

This is the brightly-colored Presentation version of the CAC 9, our 9mm subgun and carbine suppressor. This suppressor is also suitable for subsonic .30 caliber applications such as the .300 Whisper. It is 11.25" overall and 1 3/4" diameter. It is strong and light, weighing approximately 18 oz. (varying depending on the selected insert).

Available in blue or dark green, with your choice of either a fixed M11/ Standard mount for M10/9 and M11/9 in the same color as the tube and front cap, or a contrasting black AIMS™ mount.

Trivia: We own no polishing equipment. That finish is anodizing over proper machining.

Model	Retail Dealer	
PAS 9	\$385	\$285 (with matching colored fixed 3/4-10 mount)
PAS 9	\$385	\$285 (with black AIMS™ mount and any non-Uzi insert)
PAS 9	\$465	\$365 (with black AIMS™ mount and Uzi insert)

AIMS™ Mount Accessories (Accessories which will accept your Versadapt™ Inserts)

Flash Hider/Brake

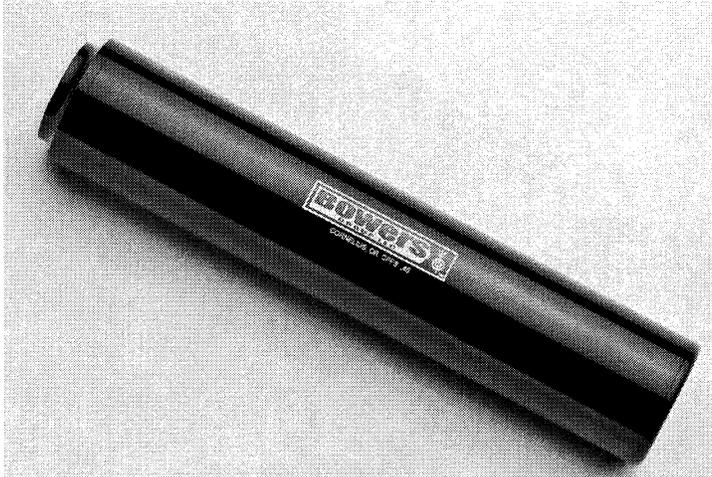

FHB9 and FHB45

Available in .45 as Model FHB .45, and in 9mm as the Model FHB 9mm, the newest addition to the AIMS™ mount family is a highly effective muzzle brake and flash hider combination. Suitable for heavy fully automatic fire with any pistol-class cartridge, it will also serve you well on semis. Use it in conjunction with any of the fifteen standard Versadapt™ inserts, available separately (it's too compact for use with the Uzi insert).

Model	Retail Dealer	
FHB9	\$75	\$55
FHB45	\$75	\$55

CFFS fake suppressor/barrel extension

If you're in the market for a fake suppressor or barrel extension, look no further. These are convincing, thick-walled aluminum replicas of a real CAC-series submachine gun suppressor. The same quality and attention to detail goes into these as does our real suppressors. The outer profiles are identical to a real suppressor, from grooves where the front cap and mount would meet the tube, to the anodized finish, precision turned exterior and laser engraving. This unit requires the use of an AIMS™ system insert, which you order separately to match the thread pitch on your host firearm.

These substantial units are dimensionally accurate and will also accept the Model 1.75 Griptastic™ covers. The dimensions are 8.5 inches long, 1.75 inches diameter and a weight of one pound, three ounces. These are suitable for heavy fully automatic fire using any pistol-class cartridge.

Model	Retail Dealer	
CFFS	\$75	\$55

Versadapt™ Inserts for AIMS™ Mount, Offered Individually

Versadapt™ Inserts

Model	Retail	Dealer	Common Usage	Index: (S)houlder (M)uzzle

VM15X1	\$45	\$35	HK Models G3, 91, 33, 93, etc. for use with .22 kits	(M)
VM16X1RH	\$45	\$35	HK Mk23 SOCOM, Glock 21 Pro (use only with CAC 45)	(M)
VM16X1LH	\$45	\$35	HK USP Tactical (use only with CAC 45)	(M)
VersUzi	\$125	\$115	Replaces barrel nut on full size and mini Uzi (not Micro)*	(S)

*Unlike some lesser systems, Model VersUzi features the appropriate hardened steel ratchet teeth to engage the weapon's barrel nut lock and an integrated barrel support. The billet stainless portion of this assembly has been blackened to match, which precludes laser marking on this distinctive insert.

Wrench **\$10** **\$10** Free with purchase of any CAC suppressor and extra insert

ATAS™ .45 Pistol Suppressors

This is our .45 ACP/.45 Super pistol suppressor, featuring interchangeable stainless steel inserts for various threads. Each suppressor comes with one insert of your choice, a black nylon transport bag with all the appropriate accessories and storage space for additional inserts.

Originally designed for the HK USP Tactical and MK23 SOCOM, these are also giving excellent service on 1911 variants, some Sigs, the occasional carbine and even Beretta 92Fs. The suppressor is intended to cycle on .45 ACP pistols using full powered ammunition and 230 grain bullets. It will continue to perform well using weaker rounds and calibers, but the firearm will not cycle in most cases due to a lack of sufficient recoil being generated by the round. The insert system allows you to mount the ATAS™ and effectively suppress a staggering array of pistols. All of the inserts are made to shoulder on the muzzle except for the ½ X 28, which is made to use the shoulder on the barrel.

The ATAS™ .45 is intended to be used only as a “wet” suppressor. As with all .45 pistol suppressors, an ablative is required to achieve good performance. Each ATAS™ is provided with a Grease Application Module and a tube of grease which will screw directly onto the linear pump. Other ablatives may be used if so desired, but the Grease Application Module allows the shooter to charge the suppressor without removing it from the firearm. When withdrawing the wand from the suppressor, the O-

ring near the end of the wand squeegees the bore to eliminate occlusion and potential resultant damage. None of our competitors offer anything like this.

Each ATAS™ .45 pistol suppressor ships complete with a black nylon transport case with belt loop and individual pockets for the suppressor, Grease Application Module, grease, wrench and a row of pockets inside the flap to hold additional inserts.

Each suppressor comes with one insert and an included wrench. This is a double ended wrench, one fits the ATAS™ inserts and will also fit the inserts, mount and front cap for the upcoming USS .22 suppressor, while the other fits the Versadapt™ inserts for the Bowers CAC-series of submachine gun suppressors.

Model	Retail Dealer
ATAS™ .45	\$725 \$600

ATAS™ Mount Accessories (Accessories which will accept your ATAS™ Inserts)

ATAS™ Flash Hiders

AFH-SS, AFH-BO

These flash hiders feature five offset slots and are available in natural stainless finish (Model AFH-SS) or black oxide (Model AFH-BO).

They are machined from 304 stainless steel billet and are threaded to accept ATAS™ inserts. These units require the use of an ATAS™ system insert, which you order separately to match the thread pitch on your host firearm.

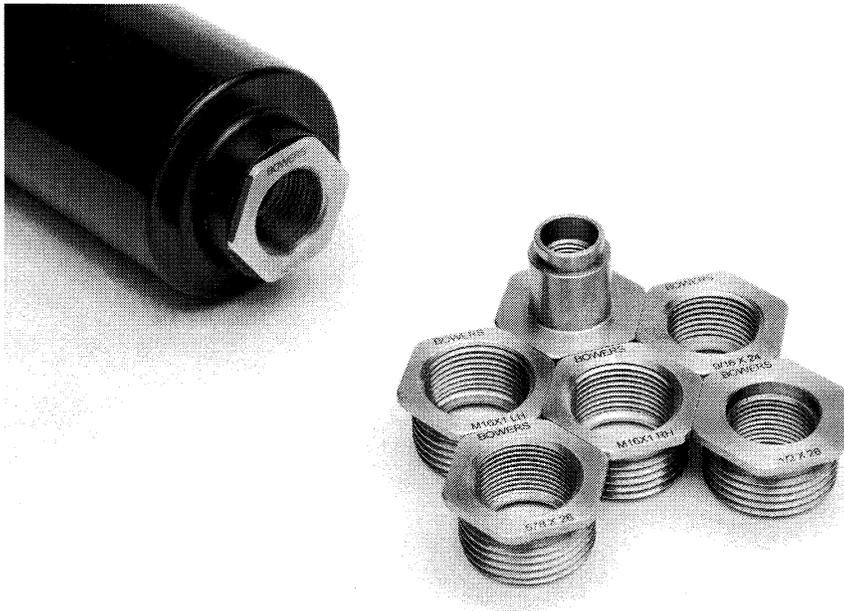

They have sufficient bore diameter to safely pass a .45, yet are tough enough to stand up to full auto fire from an 11.5" M16. They will outperform a military issue M4 flash hider in flash reduction. Slots to fit our wrenches are milled into the body.

Model	Retail Dealer	
AFH-SS	\$65	\$45
AFT-BO	\$65	\$45

ATAS™ Inserts Offered Individually

Model	Retail	Dealer	Common Usage
ATASM16X1LH	\$35	\$30	HK USP Tactical .45, etc.
ATASM16X1RH	\$35	\$30	HK MK23 SOCOM, Glock 21 Pro

ATASP22	\$35	\$30	Replaces barrel nut on the Walther P22
Spare Wrenches	\$10	\$10	One wrench is included with each ATAS™ Suppressor

ATAS™ Transport Case

This transport case is standard issue with any ATAS™ suppressor. We are now making them available to everyone who may find them useful. This offering is for the case alone; no accessories are included.

Model	Retail	Dealer
ATAS™ CASE	\$45	\$30

Paradigm .22 LR Suppressors

These are our small, very high performance .22 LR suppressors for pistols and rifles. This suppressor is machined from billet aluminum and stainless steel, with a stainless steel mount in the US standard, 1/2 X 28.

Incorporating a licensed copy of Joe Gaddini's patented Omega baffle stack, this 5" long by 1" diameter suppressor weighs in at 3 ounces with the standard mount.

An optional ATAS™ insertable mount with one included insert is available at no upcharge. If selected, this option will add approximately .125 (1/8") to the overall length of the suppressor.

The standard tube color is black, but you may order these with a royal purple or bubblegum pink tube at the same price if you desire. Please call for availability of pink, it is sold out at the time of this writing but will be available again.

This suppressor is not intended for fully-automatic fire. The upcoming steel USS suppressor is significantly heavier and longer and will be suitable for heavy full automatic fire.

Model	Retail Dealer
Paradigm	\$395 \$295

Griptastic™ High-Temp Silicone Suppressor Covers (Patent Pending)

We make suppressor covers in various lengths and diameters to fit all standard-sized suppressors. All of our suppressor covers are custom extruded from high-temperature silicone. Primarily in black with some coyote brown choices, all are made with pride in the USA.

Suppressors truly are wonderful things, but... Suppressors, particularly in center fire rifle applications or anything being subjected to fully automatic fire, will get dangerously hot fast. More than one of us has left skin on a hot suppressor and has the scars to show for it. Precision shooters will experience rapid onset of severe mirage. Suppressor heat glows brightly in IR viewers. Hot suppressors can't be removed, even with expensive "quick detach" mounts. Bag-type Nomex covers will keep you and your gear from being burned, but they will also slip and they hold in the heat even longer than if you had no cover. Our covers address all those problems.

These have been carefully engineered to provide everything you need in a suppressor cover; they're non-slip, low profile, a highly effective insulator, encourage cooling through convection by allowing airflow under the cover and are soft and "grippy" to the touch. You can dump a magazine through a can on your M16 and unscrew it immediately instead of waiting ten minutes. You won't have to pinch the can through the cover on your MAC to keep it from unscrewing, because these covers won't slip.

We have in stock all of the most common suppressor sizes. Protect yourself, your suppressors and the rest of your gear with these covers. If the exact length you'd like isn't listed, buy the longer version and you can easily trim it to length with a razor blade.

Model	Retail	Dealer (Minimum 2 for discount)	Common Usage
GT1S	\$35	\$25	Fits most very short .22 suppressors (5" X1")
GT1L	\$35	\$25	Fits most common, longer .22 suppressors (6"X1")
GT1.375CB	\$35	\$25	Coyote Brown, common center fire pistol cans (1.375 X 8")
GT1.5S	\$35	\$25	Fits most short .223 and .30 suppressors (6.5" X 1.5")
GT1.5MCB	\$35	\$25	Mid-length .223 and .30 cover in Coyote Brown (7"X1.5")
GT1.5L	\$35	\$25	Fits most longer .223 and .30 suppressors (8.5" X 1.5")
GT1.75	\$35	\$25	Fits Bowers CAC series, single stage Sionics (7" X 1.75")

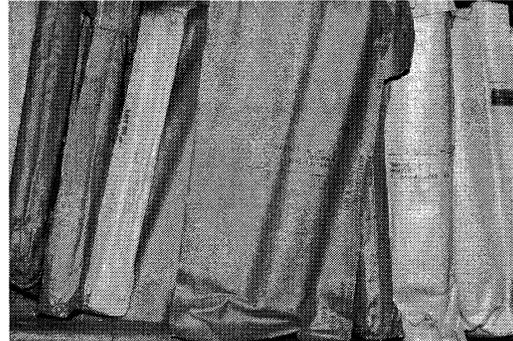

Mil/Gov/LE Sales: Our exclusive distributor is US Tactical Supply Inc., www.USTacticalSupply.com
Proprietary longer Black or Coyote Brown covers for .56 and .30 applications are also available from them under the SUPCOV™ trademark. Contact: Kevin Fandrem (541) 928-8645 or toll free at (877) 928-8645.

Miscellaneous Accessories and Services

M3 Grease Gun .45 Caliber Steel Magazines

New Old Stock, new in wrap \$35 each delivered. A limited supply is available.

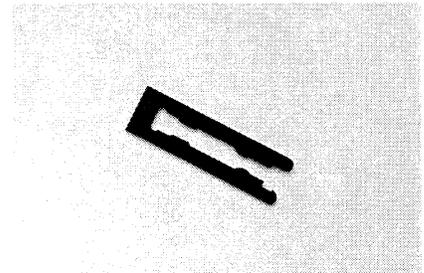

Model	Retail Dealer

CAC-Series Suppressor Retrofits

As a part of our ongoing support policy for both our dealers and end user clientele, retrofits are available for any vintage of fixed mount CAC 9, CAC 45 or CAC 380 suppressors. Retrofits consist of complete tear down and inspection followed by installation of AIMS™ mount and the latest baffle stack. The retrofit prices below each include one Versadapt™ insert.

Model	Retail Dealer		
CAC Retrofit	\$150	\$100	Price with any standard insert (specify at time of order)
CAC Retrofit	\$230	\$180	Price with Uzi insert

SIONICS-type Wipeless Suppressor Conversions and Upgrades

SIONICS retrofits consist of removal of the existing baffle stack and installation of a modern baffle stack and a wipeless end cap. This service is available for SIONICS and Military Armament Corporation cans, and any similar can of sufficient build quality containing directly interchangeable parts. We cannot work on Qualified branded variants. Retrofitted cans come under our service policy and are supported going forward as if we made the suppressor ourselves.
